P0-lite status

- Latest v2 Proof of Concept (PoC) released June 2026
- Features:
  - Boot flow across planes: P0-lite paravisor, StandaloneMM and Realm Guest UEFI
  - Integration with rust-spmc to provide FF-A services
  - StandaloneMM hosting UEFI variable and vTPM services (currently ephemeral)
  - End-to-end boot of a Realm Guest Linux OS in Plane 1
  - FF-A based comms between Plane0 services and Plane1 guests
- Arm will continue developing this PoC through to Q3 2026
- Will then review whether to take the PoC forward based on how well it works and partner feedback
